Subject: PSC Website Comments:

Dear PSC,

In light of the disaster occurring in Japan, what assurances do we have to preclude such an event here in SC? Are any of our nuclear power plants located on or near a geological fault? Can you provide more detailed information, such as a topography map detailing the location of nuclear power plants and overlain by known faults. Should an earthquake occur here in South Carolina equivalent to the earthquake that struck Charleston nearly two centuries ago, how protected are SC citizens from a nuclear disaster? Do our nuclear power plants employ passive cooling systems should Emergency Diesel Generators fail, or Emergency Core Cooling Systems and Residual Heat Removal Systems become inoperative. I live within five (5) miles of the VC Summer NPS, and I would like to know what the PSC is doing to assure the safety of residents within the ten (10) mile radius?

Sincerely,

--
